Problem Statement :

The Global Terrorism Database (GTD) is a database of terrorist incidents from 1970 to 2017 maintained by START.

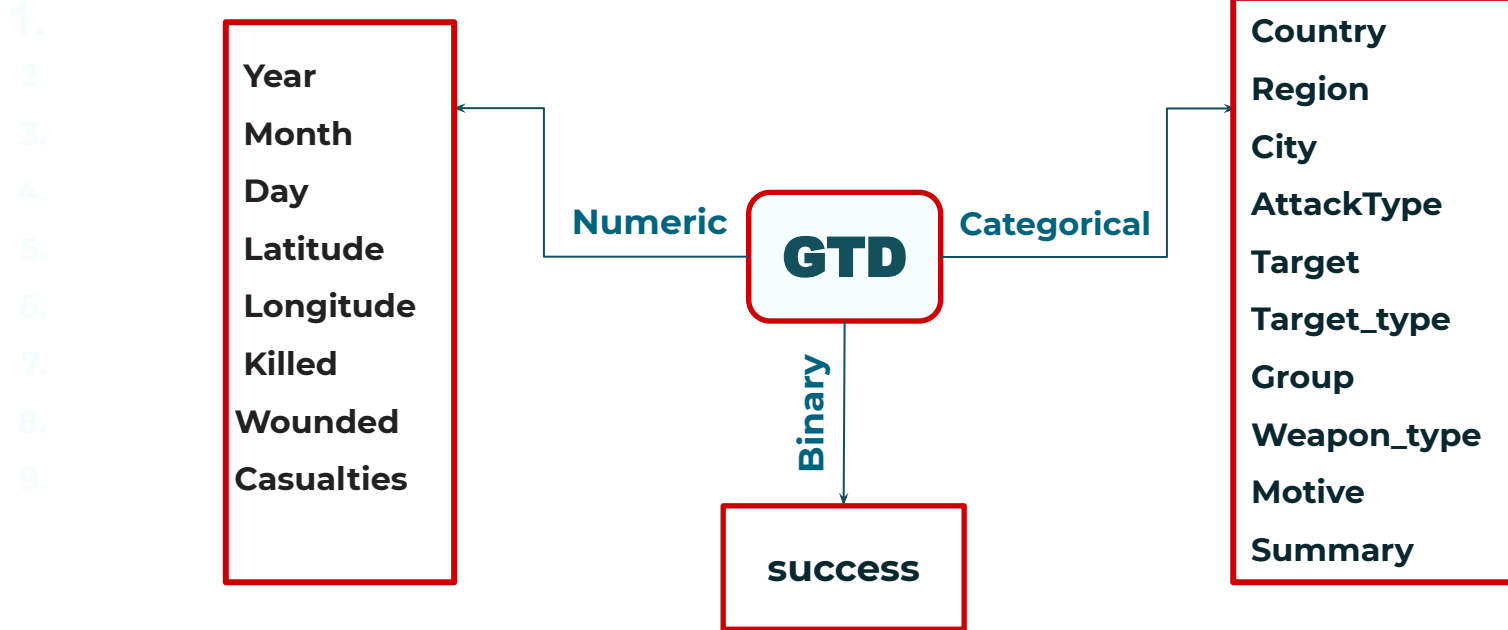

The dataset has about 1,80,000+ rows each containing information for each Attack. Our objective is to use this data, explore it, and generate insights from it.

Data Cleaning:

The data set consist of around 1,81,691 rows and 135 columns most of which have null values more than 75%. Hence, those columns have been dropped and the Data frame has been reduced to 19 columns.

Again, Null Values from these 19 columns have been replaced with suitable values.

Data Summary:

Data Summary:

Sr	Column Name	Description
1	eventid	A 12-digit Event ID system. First 8 numbers – date recorded “yyyymmdd”. Last 4 numbers – sequential case number for the given day (0001, 0002 etc).
2	Year	This field contains the year in which the incident occurred.
3	Month	This field contains the number of the month in which the incident occurred
4	Day	This field contains the numeric day of the month on which the incident occurred
5	Country	This field identifies the country or location where the incident occurred
6	Region	This field identifies the region in which the incident occurred
7	city	Name of the city, village, or town in which the incident occurred

Data Summary:

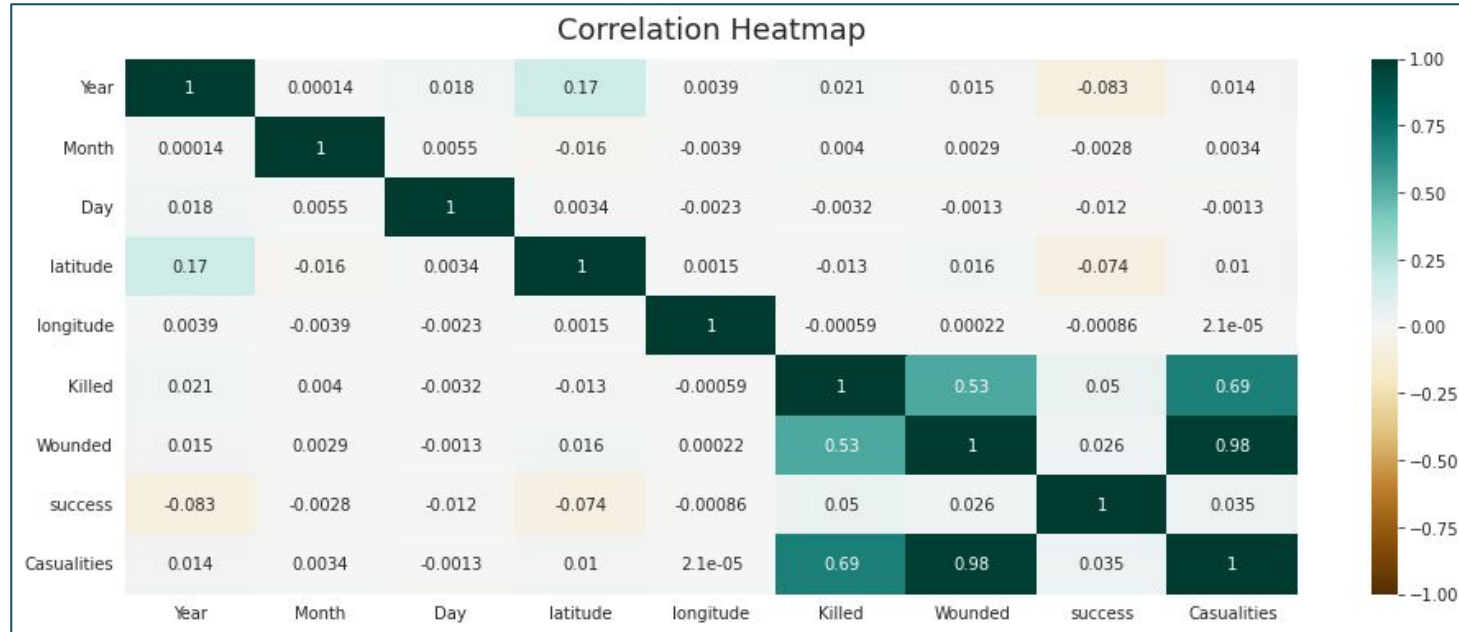

Sr	Column Name	Description
8	Latitude	The latitude of the city in which the event occurred
9	Longitude	The longitude of the city in which the event occurred
10	success	Whether the attack was successful or not
11	AttackType	The general method of attack and broad class of tactics used.
12	Target_type	The general type of target/victim
13	Group	The name of the group that carried out the attack
14	Weapon_type	General type of weapon used in the incident

Data Summary:

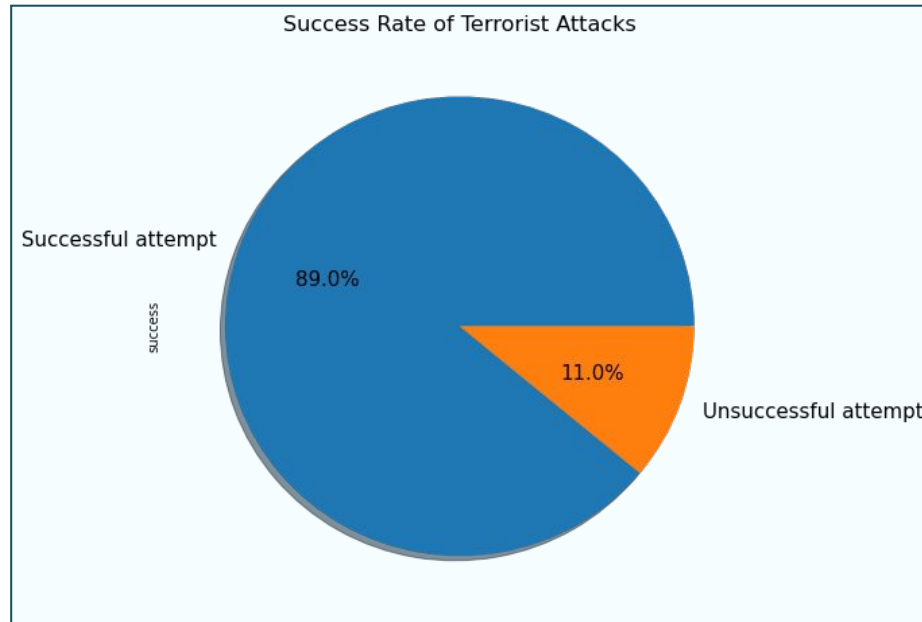

Sr	Column Name	Description
15	Killed	The number of total confirmed fatalities for the incident
16	Wounded	The number of people injured in the incident
17	Motive	Motive of the attack
18	Summary	Summary of the attack

Visualizing the Data

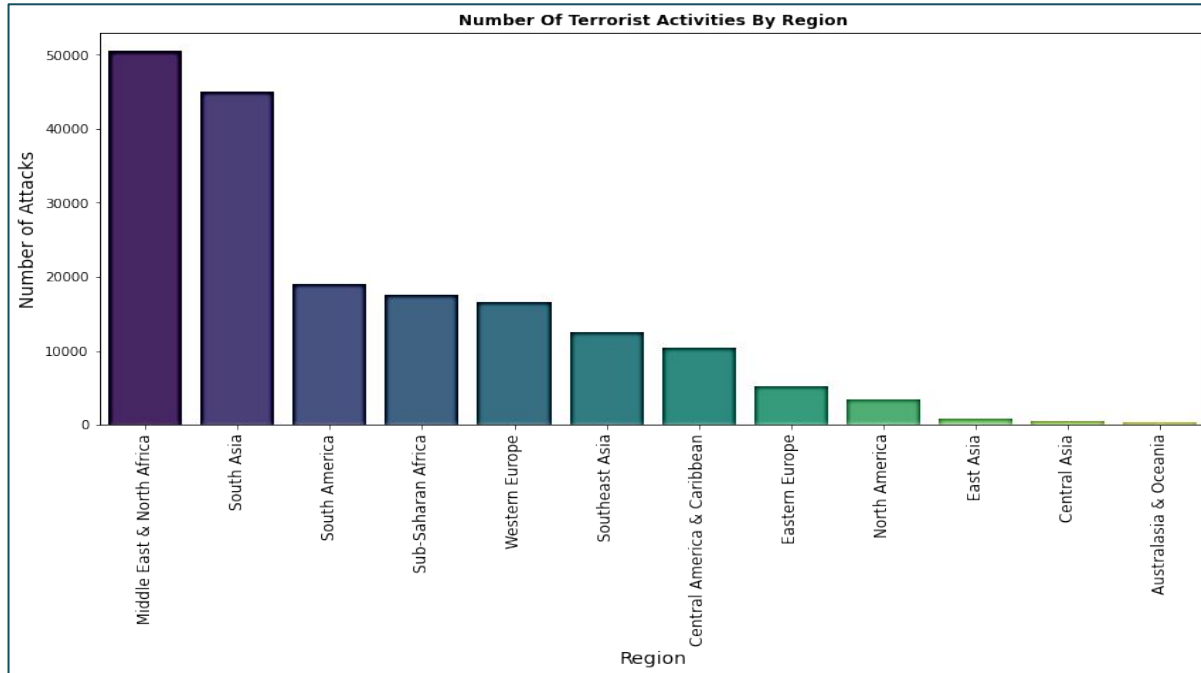

Correlation plot : This plot is used to investigate the dependence between multiple variables at the same time and to highlight the most correlated variables in a data table. In this visual, correlation coefficients are colored according to the value.

The Success Rate of the terrorist attacks is 89%, which is a big issue of concern for the safety of citizens and organisations who are responsible for the safety of everyone.

Middle East and North Africa are the most terrorism prone regions followed by South Asia. The Australia and Oceania region has experienced fewer terrorist attacks.

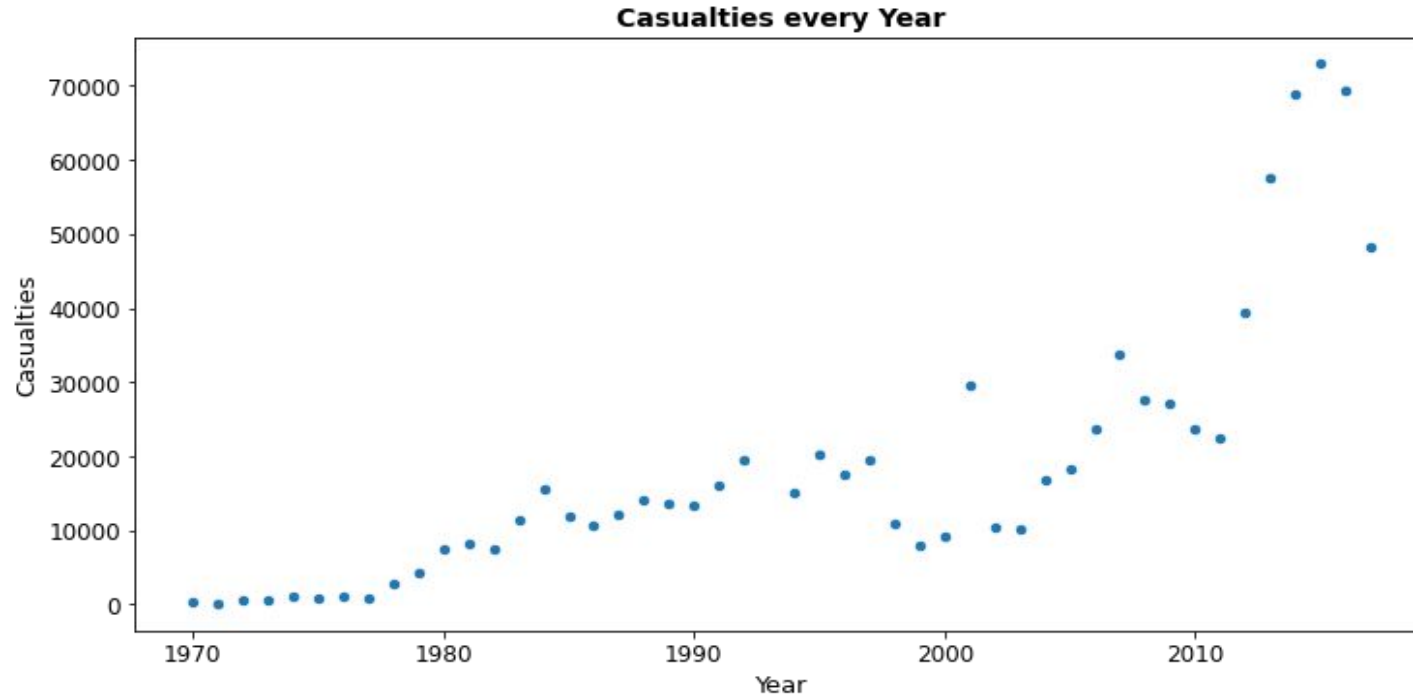

From the list of Top 10 Terror prone countries , the most number of attacks took place till now are in Iraq (~ 25,000) which is huge in (~ 50 years) i.e. on average ~ 500 attacks per year.

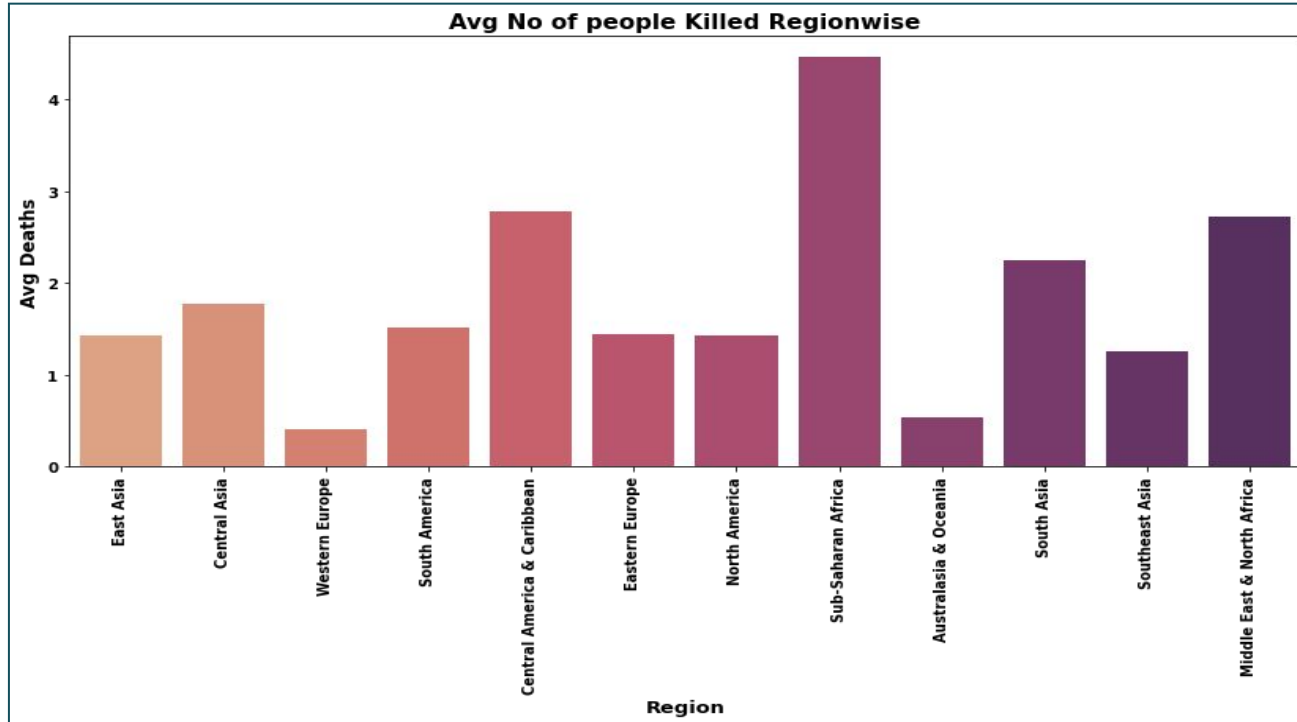

The People affected by these Terrorist attacks have been increased exponentially from the year 2000 to 2015.

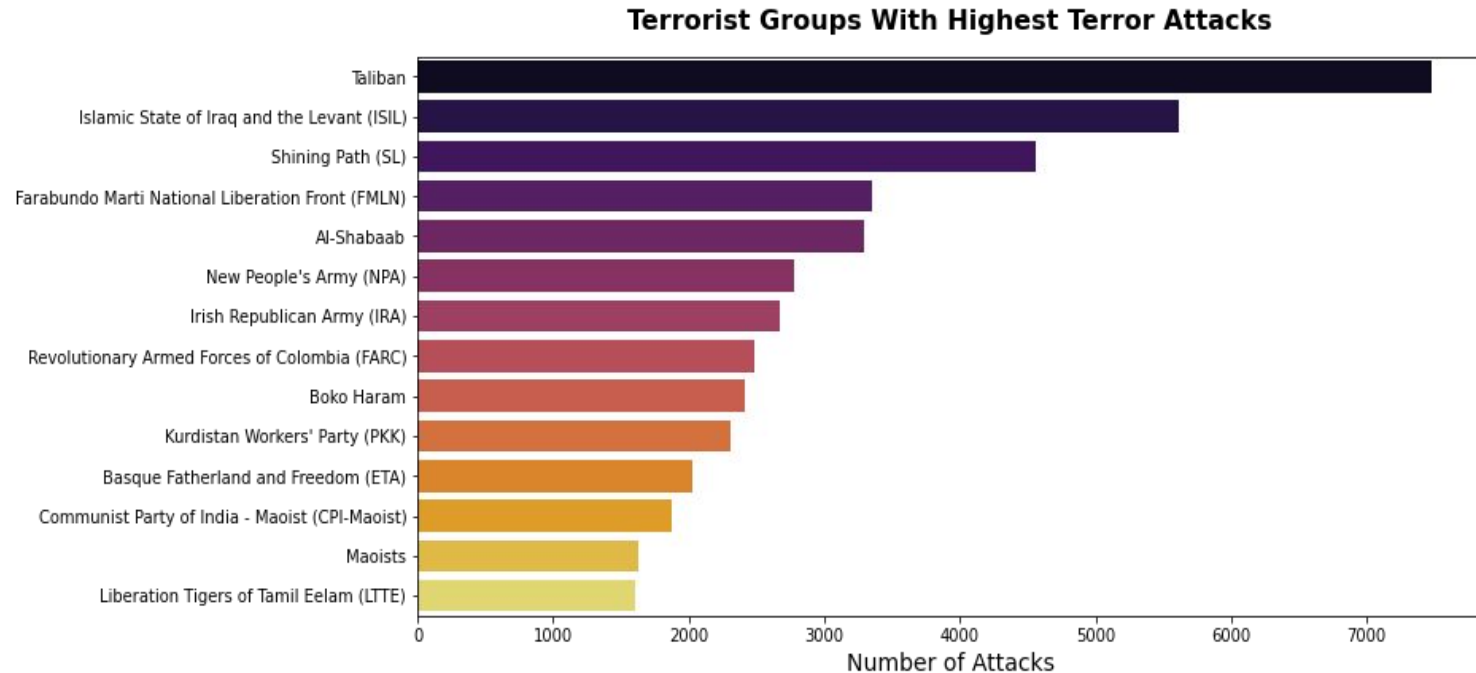

Maximum Casualties were happened in the Year 2015.

Every terror attack in Sub-Saharan Africa claims over 5 lives on average.

The terrorist Groups that have led to most number of terrorist activities are: Taliban, Islamic State of Iraq and The Levant and Shining Path.

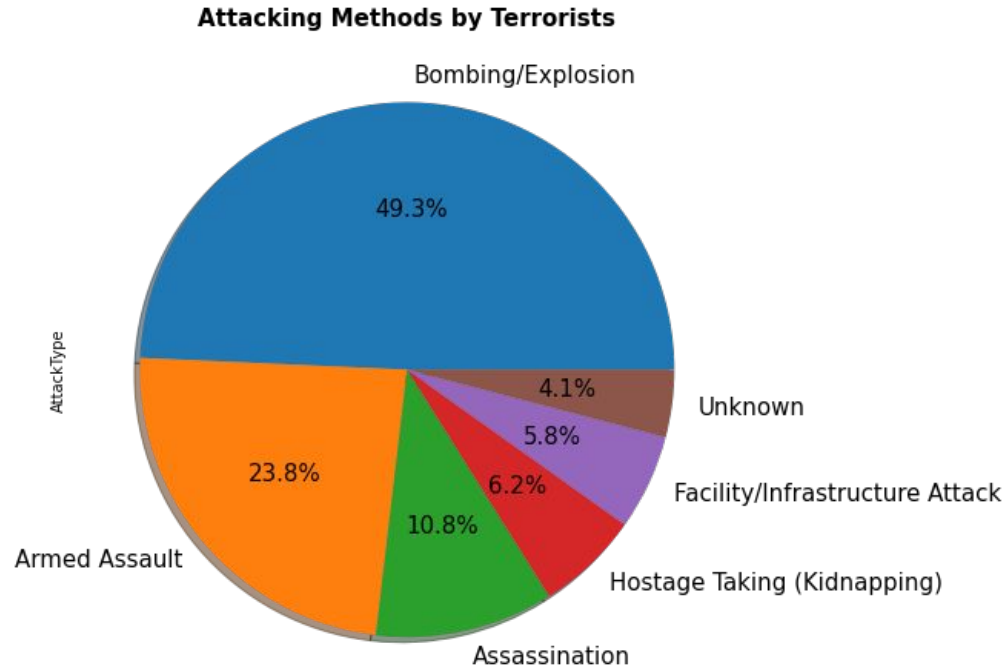

This graph confirms that Attacks increased exponentially after 2002 mainly in Middle East & North Africa and South Asia

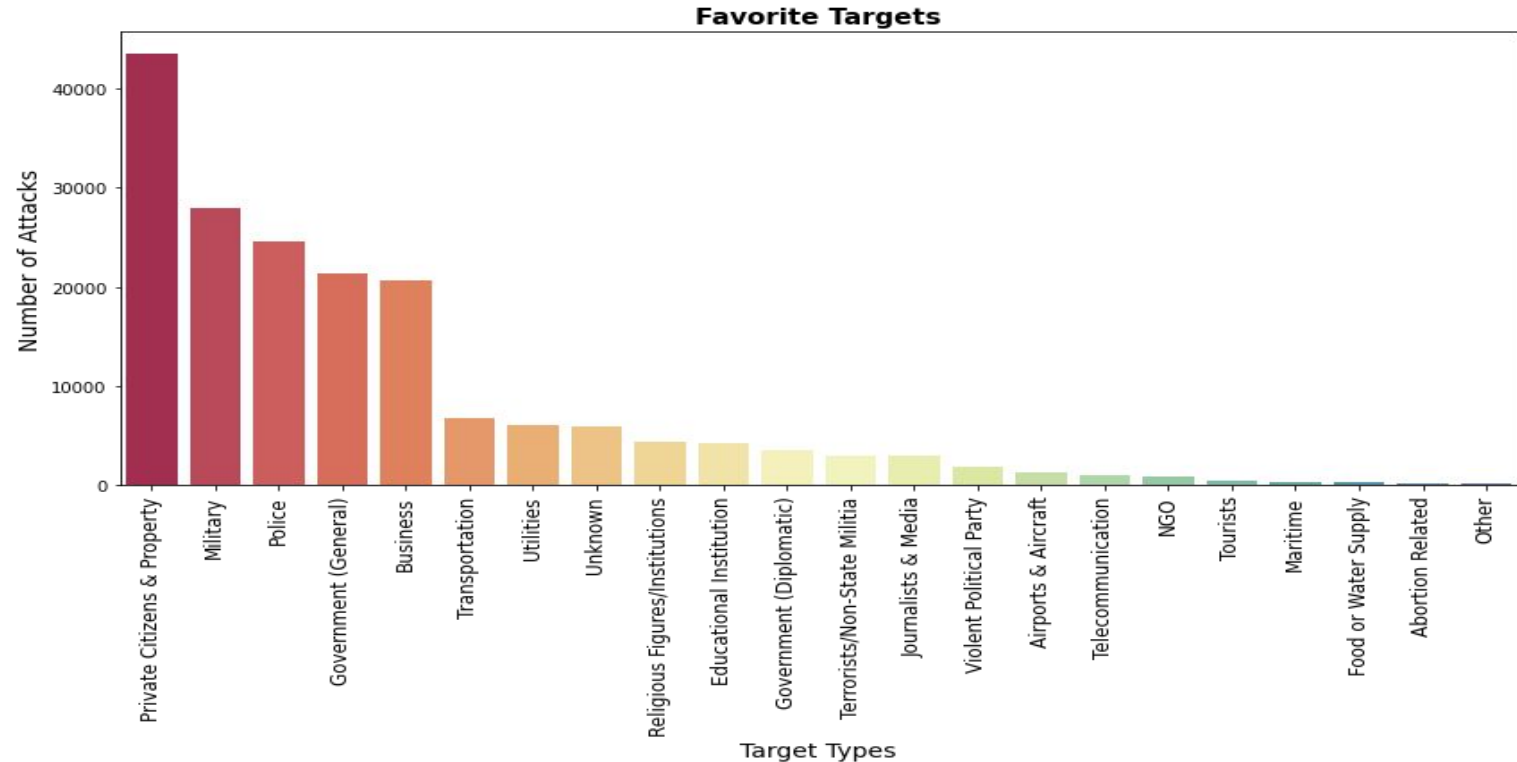

Scatter Map box is used to determine the Attack type in the specified city with number of kills

Most prominent attack mode of terrorist is Bomb/Explosion and Armed Assault

It is evident that Private Citizens & Property, Military and Police are most affected by the attacks

Analysis on India:

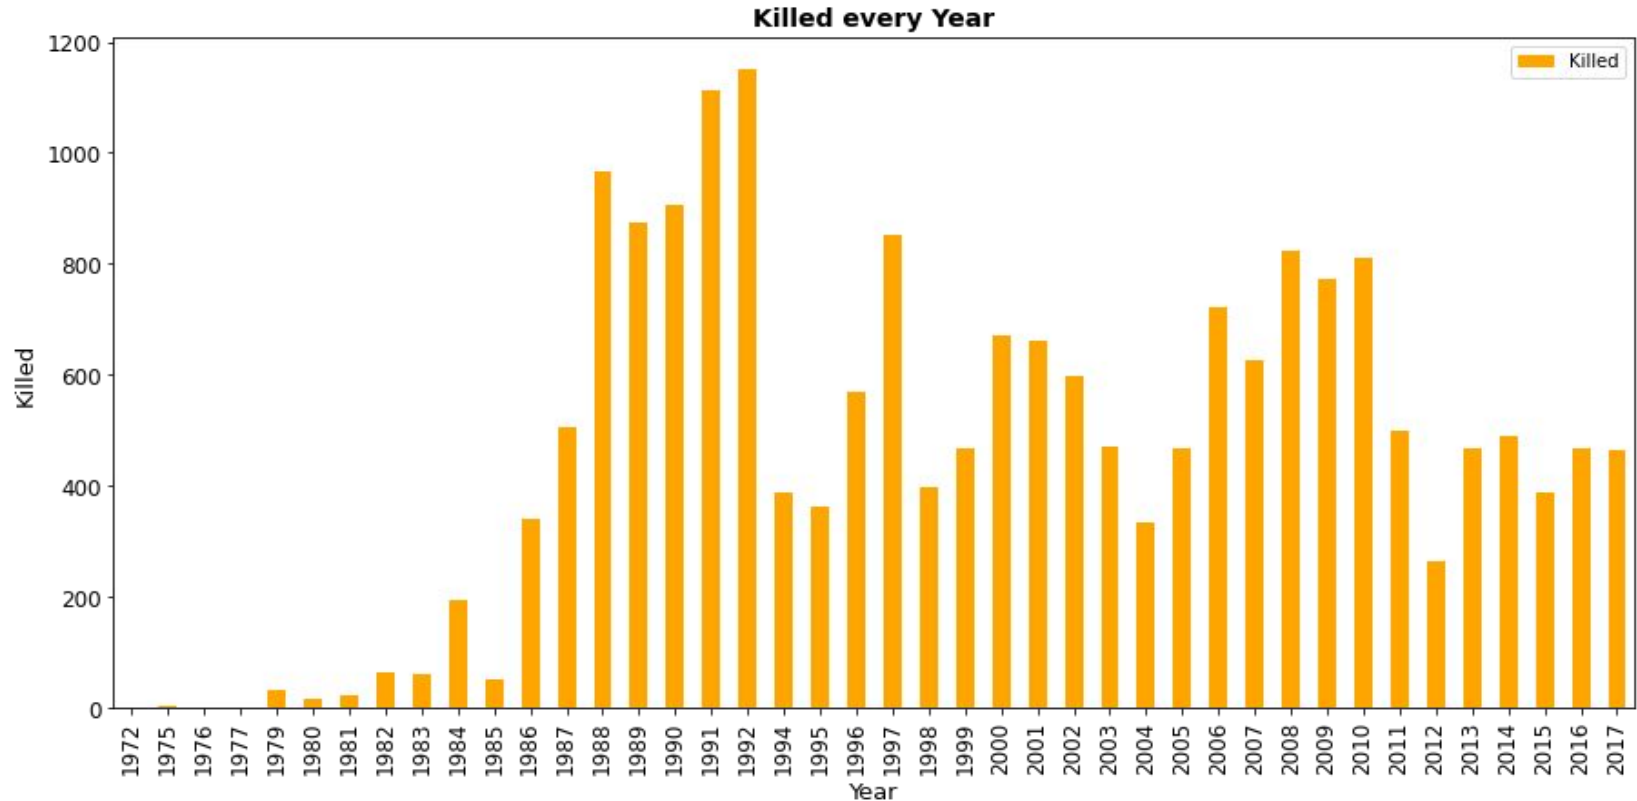

- **Maximum Casualties happened in an attack were : 1005 which took place in Mumbai in the year 2006 by the Group Lashkar-e-Taiba (LeT)**
- **Maximum people killed in an attack were : 188.0 which took place in Mumbai in the year 2006**
- **Top 4 Indian Cities with maximum number of people killed in Terrorist attacks are shown in the table**

Sr	City	Killed
1	Srinagar	540
2	Mumbai	460
3	New Delhi	309
4	Amritsar	284

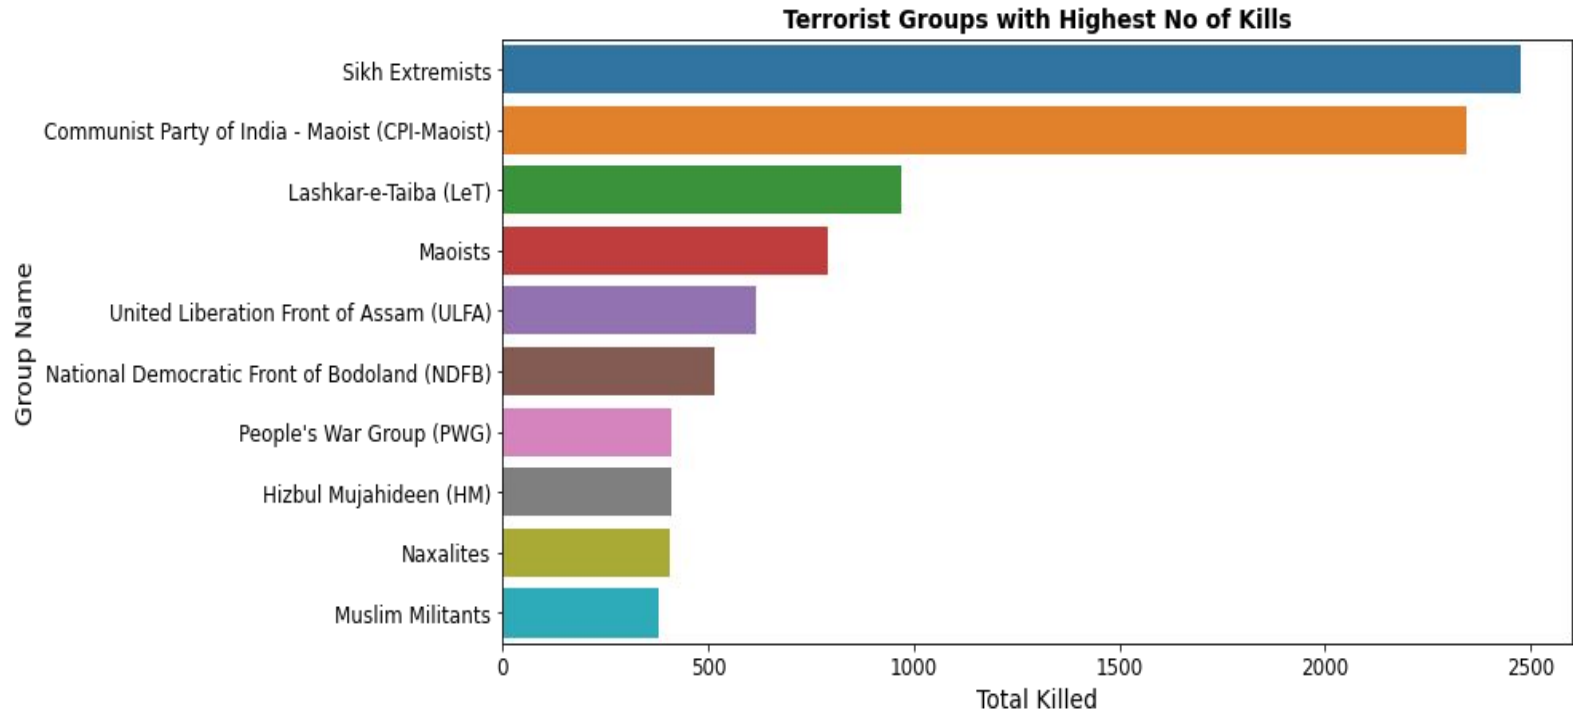

- After Year 2007 the no of attacks are increased much in India
- Year 2016 has the highest number of attack in India with total number of 1025 attacks in a year.

Most Number of People were Killed In Year 1992

Most No of Kills by various Terrorist Groups in India

Conclusion:

- For some unknown reason the dataset doesn't provide any data for the Year 1993, also from this we can't conclude that no attack has happened in this Year.
- Since the data shows the Terrorist activities and Casualties are decreasing in late years, we can optimistically say that the world can witness more and more reduction in these activities in near future.
